

April School's Out Themes

April 11th, We will have some Disney fun

Design our favorite Disney character on Mickey's head. We will have a chance to answer some fun questions about many of our favorite characters through a fun friendly game of trivia. Our day will end with a science activity of us creating the ocean that becomes friends with a beloved character, Moana.

On April 14th, Get ready to be a part of a mysterious game

Find out who stole Ms. Chy's treasure chest. The students will be able to wonder around the child care area and find clues hidden that will lead them to the suspect. Before being able to start this mysterious journey, each person will have to get fingerprinted, since no one is innocent, until after we find the culprit. Once completed, everyone will have the chance to create a secret code and create a secret message that the staff will have to figure out.

April 15th, Explore our Universe

through a rocket created by your hands. Before blasting off, we will need to test how fast our rockets will go, before being able to explore what is in our solar system. While we go exploring, we will be learning about the different planets and creating our own. Lastly, nothing is prettier at night, then looking up at the stars. Let's see what constellations we can find!

April 16th, Let's take a nice walk

around outside and see what beautiful Spring flowers we can find. We will be going on a nature scavenger hunt to see what different things can be found thanks to our wonderful Spring season. There can't be any Spring without beautiful flowers! We will be planting our own flowers in a small pot that we will be able to take home and take care of it and watch it grow from a seed to a flower using water and sunlight. There are certain insects that are not seen in the winter, but bust out of their home when Spring arrives. Butterfly suncatchers will be a great for decorations at home to help brighten up the place.

April, 17th, Dive into under the sea

Activities with some of your favorite sea creatures. We get to see sea creatures in a different light by using oil pastels and shadows. We will make a substance that will help our sea creatures meet new friends while exploring the new world. Salt is not the best thing to eat, but is wonderful when creating a bright jellyfish that shines through the water from the sunlight.

April 18th -Bibbidi-Bobbidi-Boo.

The magic is disappearing from our world and we need more witches and wizards to help aid us in humans believing in magic. We will show them how we can defy gravity with our magic wands that will be created while gaining help from mother nature. There is no powerful magic compared to the natural magic that comes from nature and within ourselves.
